Avalanche Problems

Wind Slab

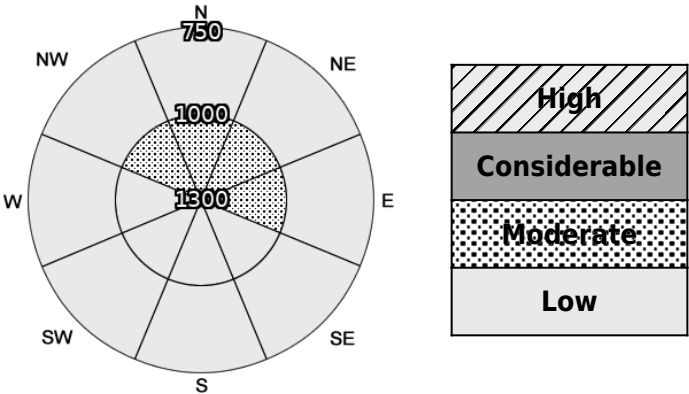

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Accumulations of unstable windslab will remain on North-West through North to Easterly aspects above 1000 metres. The greatest instability will be in steep and convex locations such as below coire rims, gully exits and crag aprons. On these aspects cornices will become increasingly unstable especially during the afternoon. Elsewhere the snowpack will be generally well bonded stable. The avalanche hazard will be Moderate.

Forecast Weather Influences

Dry conditions followed by rain at all levels during the afternoon. Winds will be strong West-South-Westerly, increasing gale to storm force later in the day. The 1100 metre freezing level will rise to above the summits by mid morning.

Comments

Mild unsettled conditions expected for the next few days.
