

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Wed 20/12/2023 TO 18:00HRS Thu 21/12/2023

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Wet and mild overnight. Colder with some light snow showers during the day. Very strong West North West winds.

Forecast Snow Stability and Avalanche Hazard

Currently there is insufficient snow cover to present any avalanche hazard and avalanche reports will not be issued for this area. Go to the Blogs and Mountain info for area photos; area info will be provided by SAIS forecasters on a daily basis.

Observed Avalanche Hazard - Wed 20/12/2023

Observed Weather Influences

Overnight snow showers turned to rain at all levels just after dawn. Strong Westerly winds. Mild at all elevations later.

Observed Snow Stability and Avalanche Hazard

Currently there is insufficient snow cover to present any avalanche hazard and avalanche reports will not be issued for this area. Go to the Blogs and Mountain info for area photos; area info will be provided by SAIS forecasters on a daily basis.

Mountain Conditions

Observed Mountain Travel Conditions

Comments

Melting of recent fresh snow expected overnight. Some thin windblown snow accumulations are possible on very sheltered lee slopes, hollows and favoured accumulation zones. These are not expected to present an avalanche hazard.
