Avalanche Hazard Forecast for Sunday 24/12/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Currently there is insufficient snow cover to present any avalanche hazard and avalanche reports will not be issued for this area until the situation changes. Go to the Blog and Mountain Info for area photos; area info will be provided by SAIS forecasters on a daily basis.

Forecast Weather Influences

Winds will be very strong West-South-Westerly. The freezing level will be above all summits overnight, then at dawn will drop to around 1100 metres. Overnight precipitation will fall as rain at all levels; during the day light showers will fall as snow only on the highest summits.

Comments

During the day light snow showers on the highest summits will be blown around by the very strong West-South-Westerly winds. Any deposits will only be in very sheltered locations at the highest levels.
