Issued 23/12/2023

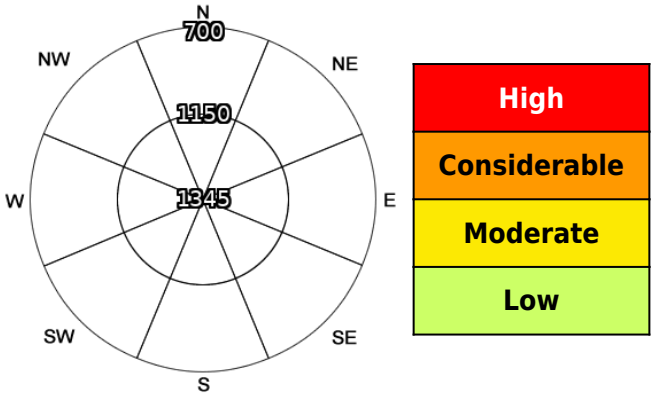

FOR PERIOD 18:00HRS Sat 23/12/2023 TO 18:00HRS Sun 24/12/2023

Avalanche Hazard Forecast for Sunday 24/12/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Currently there is insufficient snow cover to present any avalanche hazard and avalanche reports will not be issued for this area until the situation changes. Go to the blog for area photos and general information which is being provided by SAIS forecasters on a daily basis.

Forecast Weather Influences

Rain overnight followed by showers during the day falling as snow above 1000 metres. Gale to storm force West-South-Westerly winds. The freezing level will drop from above the summits to around 1100 metres by dawn.

Comments

After overnight rain, a dusting of snow is expected during the day above 1000 metres. This will lie on bare ground and is not expected to create any significant avalanche hazard.
