Southern Cairngorms

Avalanche Hazard Forecast

Issued 23/12/2023

FOR PERIOD 18:00HRS Sat 23/12/2023 TO 18:00HRS Sun 24/12/2023

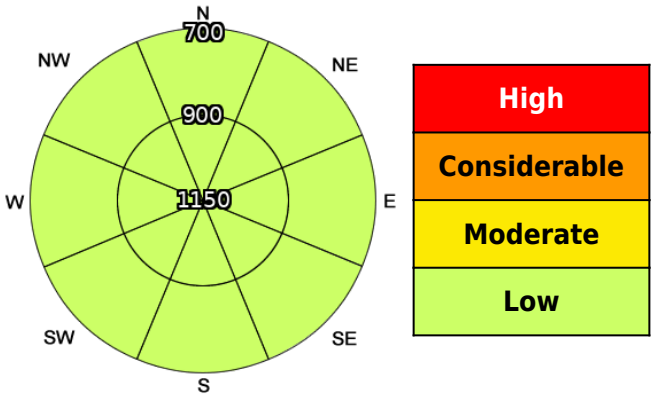
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 24/12/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The thin wet snow will start to firm up, becoming icy above 1100 metres. Below this altitude the patchy snow will remain soft and wet. Localised areas of deeper snow will be encountered in wind sheltered locations on East to South aspects above 900 metres but stability will be good. The avalanche hazard will be Low.



Forecast Weather Influences

Light rain during the early evening, easing to give a dry night. Light precipitation arriving by morning, falling as snow above 1050 metres. Strong, generally Westerly winds. Freezing level lowering from above the summits to 1100 metres by morning.

Comments

The burns are running high at present due to rain and snow melt.
