

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 27/12/2023

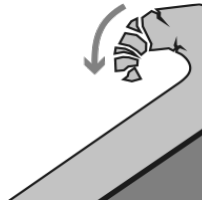

Avalanche Problems

Wind Slab

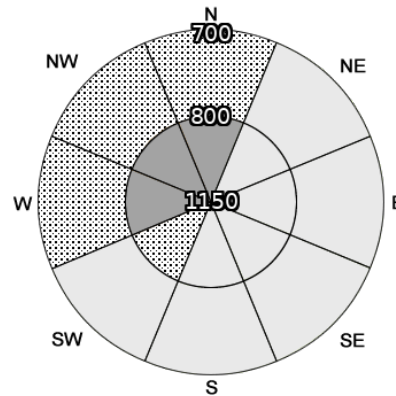

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Accumulations of fresh unstable windslab will rapidly develop in steep wind sheltered locations. South-West through West to North aspects above 800 metres will be most affected. These accumulations will be particularly unstable during the temperature rise during the afternoon when avalanches are likely. Cornices will develop above these aspects and be prone to collapse. The avalanche hazard will be Considerable.

Forecast Weather Influences

Heavy precipitation throughout the day falling as snow above 500 metres in the morning turning to rain below 950 metres in the afternoon. Storm force East-South-Easterly winds will decrease in strength through the afternoon. Around midday the freezing level will rise to about 1000 metres.

Comments

A very stormy day tomorrow.
