Torridon

Avalanche Hazard Forecast

Issued 06/01/2024

FOR PERIOD 18:00HRS Sat 06/01/2024 TO 18:00HRS Sun 07/01/2024

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 07/01/2024

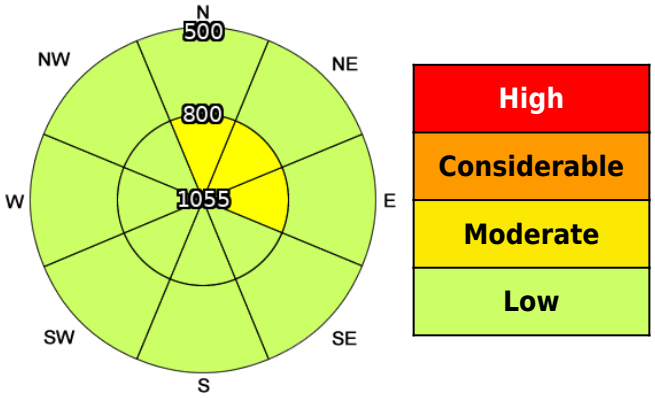

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

There will be a thin covering of new snow above around 800 metres, with some windslab present in sheltered areas mainly on North-East through East to South aspects above 850 metres. Accumulations having gained depth will be localised. The patchy older snowpack, which lies mainly on South-West through West to North aspects above 800 metres will be generally stable, with its surface continuing to refreeze. The avalanche hazard will be Low.

Forecast Weather Influences

Winds will be light, generally West-South-Westerly, then variable during the afternoon. A few light showers falling as snow above around 750 metres are expected at first during the evening, then mainly dry. The freezing level will be around 800 metres.

Comments

High pressure is expected to dominate for a few days.
