

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 09/01/2024 TO 18:00HRS Wed 10/01/2024

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Remaining cold and dry throughout. Light East-North-East winds will freshen later.

Forecast Snow Stability and Avalanche Hazard

Little change. Stability will remain good in most locations. Localised pockets of cold softer snow will persist on a few steep North-West through North to North-East aspects above 1000m. The avalanche hazard will be Low.

Observed Avalanche Hazard - Tue 09/01/2024

Observed Weather Influences

Cold, dry, clear with light Easterly winds.

Observed Snow Stability and Avalanche Hazard

Good stability in most locations. The snowpack is hard, or crusty, and tightly bonded in many places. A few localised pockets of softer snow lie high on some steep North-West through North to North-East aspects above 1000m. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions	Steep, good snow ice conditions, mostly icy at higher elevations. Cold clear conditions. Winds approx 10mph or less.
Comments	Good general stability. Localised pockets of cold soft snow high up in some gullies and scarp slopes.
