Southern Cairngorms

Avalanche Hazard Forecast

Issued 12/01/2024

FOR PERIOD 18:00HRS Fri 12/01/2024 TO 18:00HRS Sat 13/01/2024

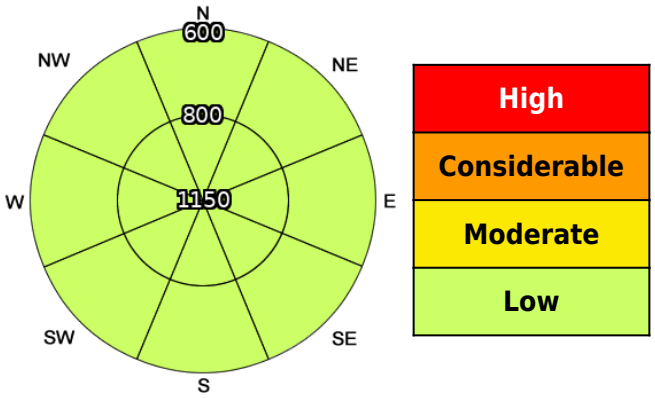
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 13/01/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The majority of the snowpack will remain generally stable. Existing pockets of soft unstable snow will primarily be on West to North aspects above 900 metres. As the day progresses these will be eroded as the wind strength from the North-West increases. The avalanche hazard will be Low.



Forecast Weather Influences

A fluctuation freezing level will settle around 800 metres during the day. Expected to be dry and cloudy throughout the forecast period. Winds will be moderate to fresh from the North-West.

Comments

Snow is very firm in some locations. Witnessed a few kick turns going wrong! Ice axes, crampons and harscheisen for ski tourers advised.
