Southern Cairngorms

Avalanche Hazard Forecast

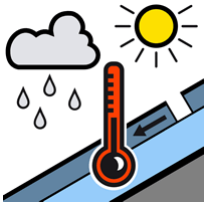
Issued 24/01/2024

FOR PERIOD 18:00HRS Wed 24/01/2024 TO 18:00HRS Thu 25/01/2024

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 25/01/2024

Avalanche Problems

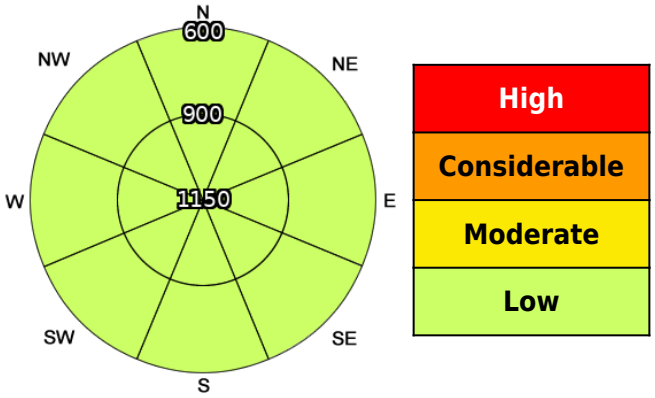


Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The majority of the snowpack will be generally well bonded. New accumulations will form, deepest accumulations are expected in wind sheltered locations on North to East aspects above 900 metres. Surface instabilities are possible on steep terrain such as gully exits and scarp slopes as snowfall turns to rain and freezing levels rise. Stability of remaining cornices will be poor. The avalanche hazard will be Low.



Forecast Weather Influences

Becoming cooler with the freezing level around 900 metres overnight, rising above all summits in the afternoon. Snow showers early morning but turning to rain as the freezing level rises. Strong winds, South-South-East or South during snowfall.

Comments

Snowfall expected to turn to rain late morning.
