

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 29/01/2024

Avalanche Problems

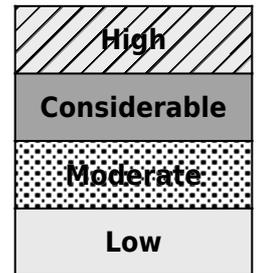

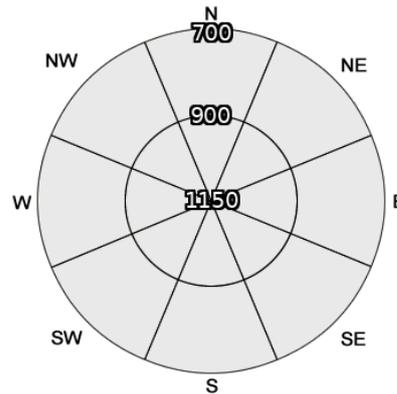

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

A return to colder conditions will start to firm up the older snowpack maintaining good general stability. Isolated areas of windslab may form overnight in wind sheltered areas such as summit gullies and on North-East to South-Easterly slopes. With only very light snowfall expected windslab accumulations are not expected to be deep or extensive. Any fresh cornices will be fragile. The avalanche hazard will be Low.

Forecast Weather Influences

Very light snow showers and strong Westerly winds will affect the highest slopes overnight. Through the day it will be dry with the freezing level around 700-800 metres. Winds will be light to moderate variable but generally East to South-Easterly.

Comments

Becoming colder and calmer on Monday. New snow amounts overnight are not expected to be significant but pockets of fresh windslab will be weakly bonded and any fresh cornices will be fragile.
