

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 04/02/2024

Avalanche Problems

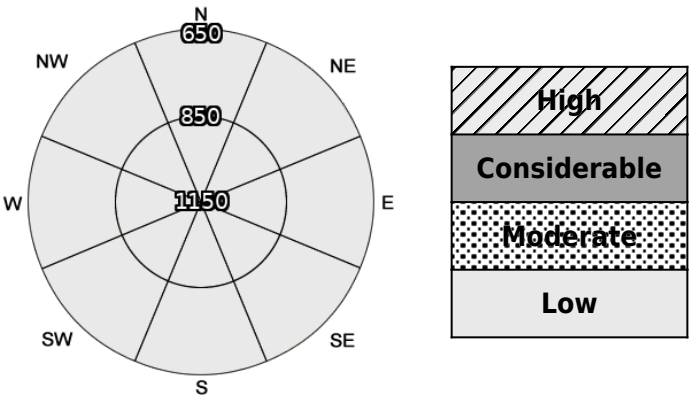

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Further accumulations of windslab will form mainly on North through East to South-East aspects above 850 metres. Where these deposits achieve depth they will be weakly bonded but they are not expected to be extensive. Steep wind sheltered locations such as gully tops and coire rims will be particularly affected. Fragile cornices may also exist above these locations. Elsewhere the older moist snowpack will be scoured, firm and icy. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight, the freezing level will be around 800 metres rising to around 1100 metres during the day. Winds will be strong to gale force West-South-Westerly through Saturday night becoming Westerly and easing slightly during Sunday bringing further sleet and snow showers.

Comments

Winds, Westerly 50mph in the morning to perhaps 60mph. Will drop to 40 mph by dusk. During the snow showers whiteout conditions above 800 metres.
