

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Monday 05/02/2024****Avalanche Problems****Wind Slab****Wet Snow****Cornices****Forecast Snow Stability & Avalanche Hazard**

Further unstable windslab will be deposited through the evening, mainly on North-East to South-East aspects above 900 metres. There will be a period of reduced stability overnight, as snow turns to rain, followed by a slow consolidation of the snowpack during the day. Other aspects and lower elevations will be generally stable. Cornices will be prone to collapse. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Fresh to strong West backing South-Westerly winds. Snow above 700 metres in the evening turns to rain at all levels overnight, getting heavier during the day. The freezing level will be around 800 metres in the evening and then will rise to above the summits.

Comments

A very wet day forecast for Monday followed by cooler and drier conditions.
