Avalanche Hazard Forecast

Issued 05/02/2024

FOR PERIOD 18:00HRS Mon 05/02/2024 TO 18:00HRS Tue 06/02/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 06/02/2024

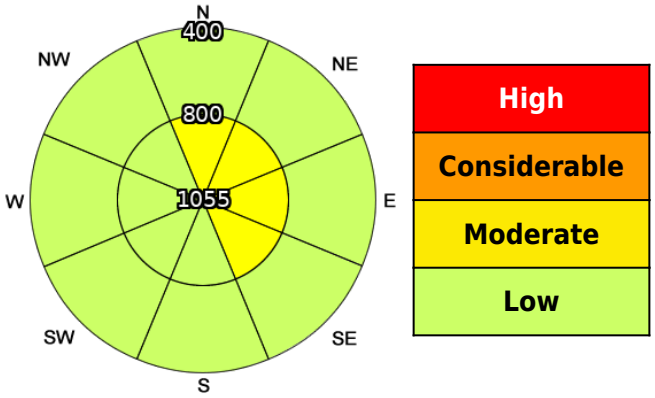

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The old snow lying thinly above 800 metres will freeze and stabilise. New accumulations of snow will gradually build on Northerly through East to South-Easterly aspects. This will lie on slopes at all levels but will only be of significance at higher elevations above 800 metres where it gains depth. Wind sheltered coire rims and gully tops being most affected. The avalanche hazard will be Moderate.

Forecast Weather Influences

Getting colder! Freezing level around the summits overnight will lower to around 500 metres by daybreak then to 400 metres by the end of the forecast period. Precipitation falling as snow, mostly showers, sometimes heavier, throughout the forecast period, lying at glen level at around 200 metres and above. Winds will be strong to gale force West-South-Westerly to North-Westerly.

Comments

Turning colder with snow lying to low levels in showers.
