

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 06/02/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will consolidate and become firm at all elevations. A trace of new snow will be present above 600 metres by the end of the period, any unstable accumulations will be small and avoidable. These will be confined to very steep, wind sheltered locations such as coire rims. The avalanche hazard will be Low.

Forecast Weather Influences

Rain overnight will gradually turn to snow as the freezing level drops. Showers are expected to be light, with small snow quantities lying above 400 metres by the end of the period. Winds will be generally gale force Westerlies, veering to become West-North-Westerly later. The freezing level will fall overnight, fluctuating around 600 metres by dawn.

Comments

Colder conditions in prospect. A firm snowpack and icy surfaces may be consequential in the event of a slide or fall.
