

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 08/02/2024

Avalanche Problems

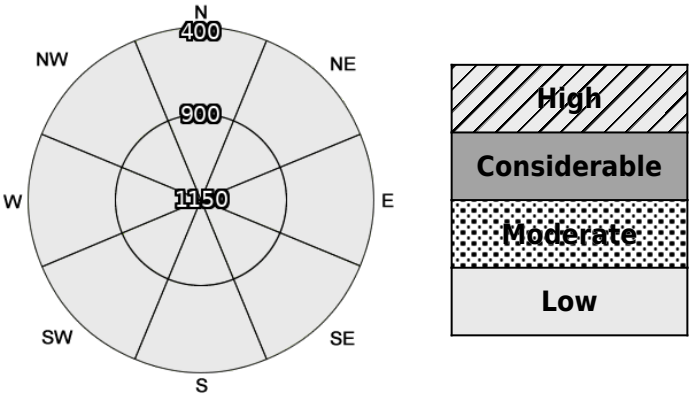

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The older snowpack will remain firm and icy in exposed locations with good general stability. Some redistribution of more recent snow will occur as the winds move into the East, localised areas of unstable windslab may form around the tops of summit gullies and on steep scarp slopes and corrie rims with a mainly South-West to Northerly aspect. These areas are not expected to be deep or extensive and should in the main be avoidable. Fresh cornices will be fragile. The avalanche hazard will be Low.

Forecast Weather Influences

Dry and cold conditions will affect the area overnight and through Thursday. Moderate to fresh Easterly winds in the morning will strengthen through the day becoming strong occasionally gale by evening. The freezing level will be around 200 to 300 metres.

Comments

Cold conditions with high wind chill developing through the day. Ice on paths, rocks and in watercourses. The snowpack will be firm and icy in exposed location with serious consequences in the event of an uncontrolled slip or fall. Fresh cornices if they form will be fragile.
