# Torridon

Avalanche Hazard Forecast

**Issued 10/02/2024**

FOR PERIOD 18:00HRS Sat 10/02/2024 TO 18:00HRS Sun 11/02/2024

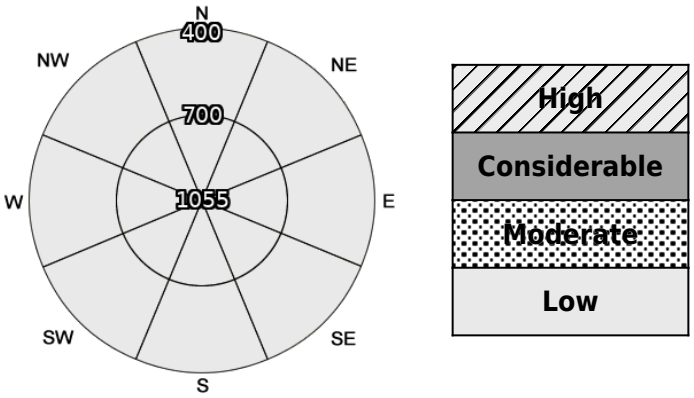

## THE AVALANCHE HAZARD WILL BE LOW

### Avalanche Hazard Forecast for Sunday 11/02/2024

#### Avalanche Problems

#### Forecast Snow Stability & Avalanche Hazard

The old snow remnants will remain very firm and icy. The thin covering of soft snow will gradually thaw, with the slightly deeper accumulations that exist on Westerly aspects, largely above 700 metres, quickly consolidating in the warmer temperatures. Snowpack stability will be good. Isolated windslab deposits may develop on steep North and North-East aspects, above 900 metres, during the afternoon. Any new deposits will be shallow and easily avoidable. The avalanche hazard will be Low.

#### Forecast Weather Influences

A mainly dry day with the possibility of some summit snow in the afternoon. The freezing level will be around the highest summits falling slightly towards the end of the day. Light predominately Southerly winds will become moderate South-South-Westerly.

#### Comments

Some uncertainty how much snow, if any at all, will reach the Torridon area Sunday afternoon.
