

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Monday 12/02/2024

Avalanche Problems

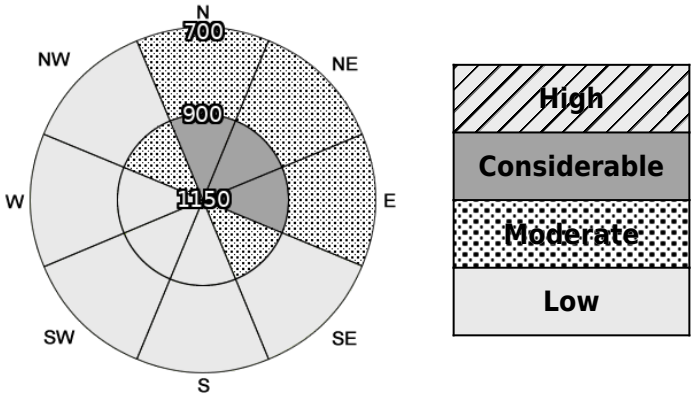

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Fresh unstable windslab will develop through the period with greatest accumulations on North to East aspects above 900 metres. Fragile cornices will develop above these aspects. North-West and South-East aspects will be affected by crossloading. Aspects exposed to the wind will be generally stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

Showers throughout the period, heaviest in the afternoon. These will fall as snow above 800 metres initially, gradually dropping to 400 metres in the afternoon. Fresh South-West winds overnight will become strong during the day. The freezing level will gradually drop from 900 to 500 metres.

Comments

Greatest hazard in the afternoon with heavier snow and stronger winds.
