Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 12/02/2024 TO 18:00HRS Tue 13/02/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 13/02/2024

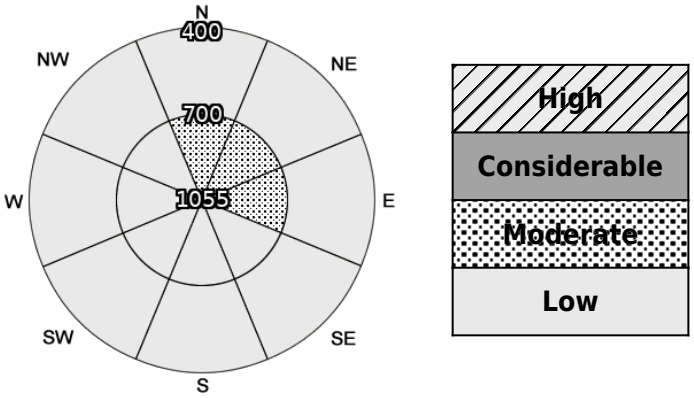

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Localised deposits of moderately bonded windslab will continue to build throughout the period, gaining depth on steep wind sheltered locations. Terrain most affected will be gullies, gully exits and coire rims mainly on North to East aspects above 700 metres. Elsewhere the snow cover will remain stable, shallow and largely lie on bare ground. Exposed patches of old snow will be very firm. The avalanche hazard will be Moderate.

Forecast Weather Influences

Showers will continue throughout the period, mainly overnight and early morning, wintry above 400 metres initially, gradually rising to 650 metres in the afternoon as the freezing level follows the same trend. The strong South-Westerly wind will ease slightly in the afternoon.

Comments

Remaining unsettled with fluctuating freezing levels.
