

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 14/02/2024

Avalanche Problems

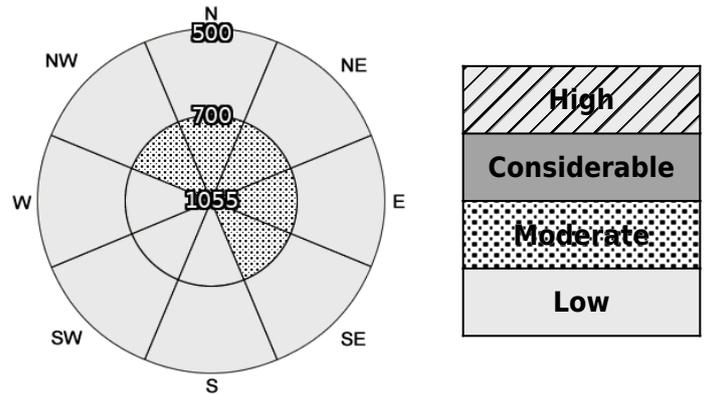

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Deep, localised accumulations of moderately bonded windslab will persist in steep locations, mainly North to East aspects above 700 metres. Most affected will be coire rims, crag aprons, ridge flanks, gullies and gully tops. Some North-West and South-East aspects will be affected due to cross loading. Fragile cornices will exist above same locations. Elsewhere, the snowpack will be shallow and stable. Wind exposed terrain will be scoured. The avalanche hazard will be Moderate.

Forecast Weather Influences

It will be a largely dry period. The strong South-West winds will ease overnight, backing light Easterly by daybreak and gradually freshening through the day. The freezing level will rise to summit level by the end of the afternoon from around 700 metres overnight.

Comments

Lighter winds and largely dry tomorrow ahead of the next weather front arriving evening/overnight Wednesday.
