Avalanche Hazard Forecast

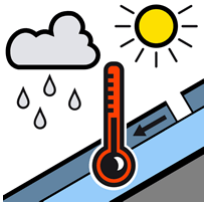

Issued 14/02/2024

FOR PERIOD 18:00HRS Wed 14/02/2024 TO 18:00HRS Thu 15/02/2024

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 15/02/2024

Avalanche Problems

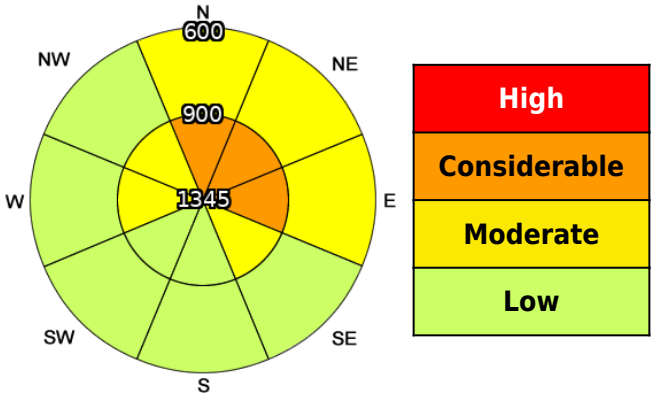

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The rain will have a destabilising effect on the areas of moderately bonded windslab which will be found mainly, but not exclusively, on North to East aspects above 900 metres. Cornices will become prone to collapse as they become wet. Stability will start to slowly improve later in the day. Below 900 metres the snowpack will be wet throughout, more consolidated and stability will be better. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will be mild with the freezing level around 1700 metres. There will be some rain later in the night and during the morning.

Comments

A milder few days expected.
