

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 16/02/2024

Avalanche Problems

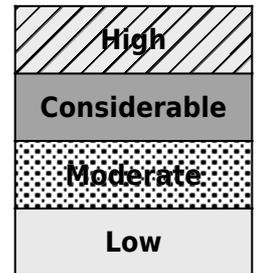

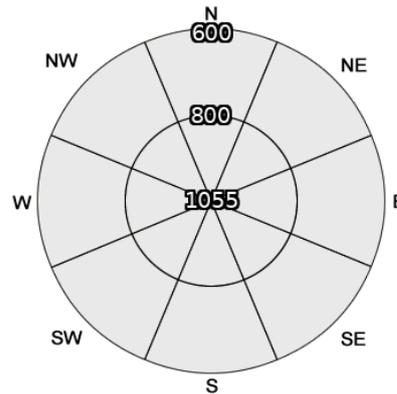

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Isolated wet snow instabilities will persist mainly on steep North to East aspects above 800 metres with locations where the more recent soft snow overlies the older firm snowpack particularly affected. In other locations the snowpack is consolidating and stability is generally good. Any remaining cornices will be prone to collapse. The avalanche hazard will be Low.

Forecast Weather Influences

Rain overnight followed by a mainly dry day. Fresh South-Westerly winds overnight become light and variable during the day. The freezing level remains above the summits.

Comments

Remaining mild.
