

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 27/02/2024

Avalanche Problems

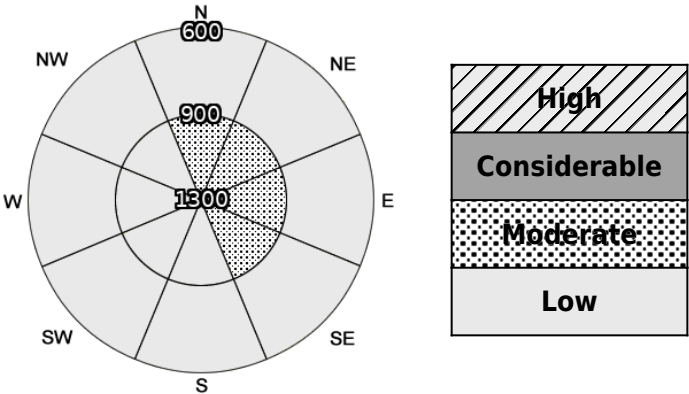

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will be deposited throughout the period on North through East to South-East aspects above 900 metres. Areas most affected will be steep wind sheltered terrain such as coire rims, gully tops and convexities, particularly where this overlies the older firm snowpack. Wind exposed slopes will become scoured. Cornices will develop as the day progresses. The avalanche hazard will be Moderate.

Forecast Weather Influences

Snow showers are expected from the early hours. Initially confined to above 1000 metres, falling to lower elevations during the day above 700 metres. Winds will be mostly from the South-West and storm force overnight. During the day winds will be very strong and from the West-South-West veering to the West later. The freezing level will fluctuate around 1000 metres overnight but is expected to stay around 800 metres during the day.

Comments

A cosmetic dusting of new snow disguises firm snow in some locations.
