# Southern Cairngorms

Avalanche Hazard Forecast

**Issued 26/02/2024**

FOR PERIOD 18:00HRS Mon 26/02/2024 TO 18:00HRS Tue 27/02/2024

## THE AVALANCHE HAZARD WILL BE MODERATE

### Avalanche Hazard Forecast for Tuesday 27/02/2024

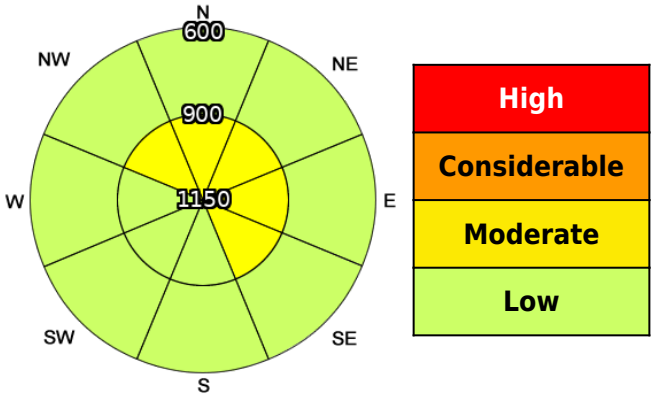
#### Avalanche Problems

**Wind Slab**

**Cornices**

#### Forecast Snow Stability & Avalanche Hazard

Areas of unstable windslab will develop in wind sheltered locations predominantly on North to East aspects above 900 metres. Isolated pockets may also be encountered on both North-West and South-East aspects. Corrie rims, gully tops and scarp slopes will be most affected. Unstable cornices will start to develop above these aspects. Any exposed terrain will be scoured and icy. The avalanche hazard will be Moderate.



#### Forecast Weather Influences

There will be precipitation throughout the day, heaviest in the morning, easing slightly by afternoon. Initially falling as snow above 600 metres, then later above 750 metres. Winds, strengthening and veering throughout from the South-South-West to become Westerly by the end of the period.

#### Comments

Definitely Winter conditions above 900 metres. Icy underfoot in many areas.
