Southern Cairngorms

Avalanche Hazard Forecast

Issued 28/02/2024

FOR PERIOD 18:00HRS Wed 28/02/2024 TO 18:00HRS Thu 29/02/2024

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 29/02/2024

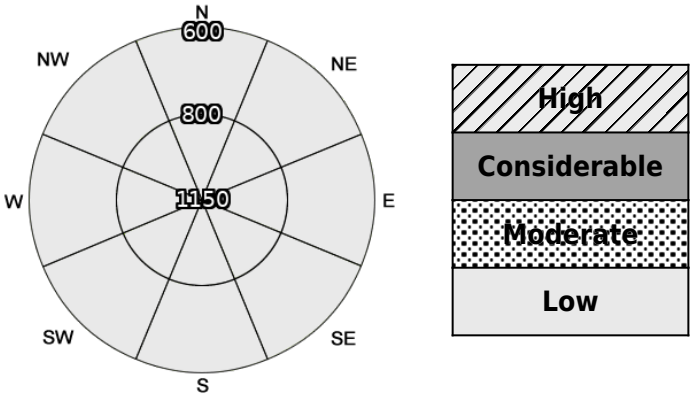

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

After overnight thaw conditions, older snow is expected to become firmer, particularly at higher levels. New windslab accumulations that develop over older snow-ice will be isolated and generally inconsequential. These deposits will be found in wind sheltered features such as corrie rims and gully tops on North to East facing aspects above 900 metres. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight the freezing level will be above the summits with rain at all levels. By dawn the freezing level will be around 600 metres with light snow showers during the day. Gale force winds from the South-West throughout the period.

Comments

Thaw conditions overnight. New snow during the day.
