Avalanche Hazard Forecast

Issued 07/03/2024

FOR PERIOD 18:00HRS Thu 07/03/2024 TO 18:00HRS Fri 08/03/2024

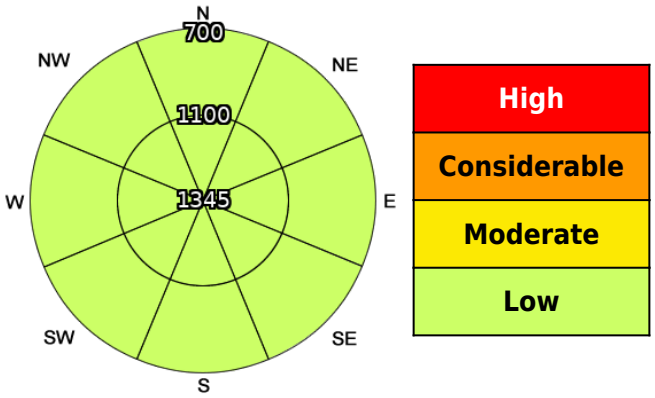

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 08/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to consolidate at all altitudes and be generally well bonded and stable in most locations. Some isolated instabilities will persist on very steep North-West to North-East aspects above 1100 metres. Cornices will overhang these aspects. The avalanche hazard will be Low.

Forecast Weather Influences

Dry throughout the forecast period with strong East-South-East winds. The 900 metre freezing level will steadily fall to around 600 metres.

Comments

Inversion conditions; although the freezing level is above the summits the airmass over the mountains will remain cool.
