Southern Cairngorms

Avalanche Hazard Forecast

Issued 10/03/2024

FOR PERIOD 18:00HRS Sun 10/03/2024 TO 18:00HRS Mon 11/03/2024

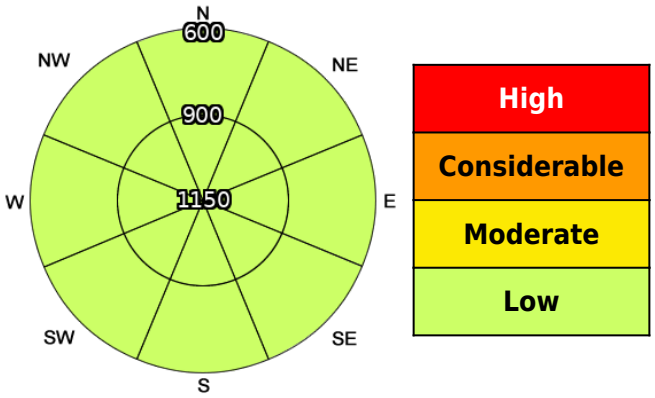

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 11/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The vast majority of the snow will be well bonded and stable. Areas exposed to the wind will be firm and often icy. Isolated pockets of softer, less well bonded snow may be encountered in steep, wind sheltered locations on West to North aspects above 900 metres. Gully tops and around sharply defined corrie rims are the locations where you are most likely to encounter these conditions. Small cornices will be present above these aspects. The avalanche hazard will be Low.

Forecast Weather Influences

Dry conditions are expected during the day. Winds will be fresh Easterly, easing to become moderate East-South-Easterly by early afternoon. Freezing level will rise from 700 metres overnight, to become 800 metres later in the day.

Comments

Winter conditions above 850m. Firm and icy snow present in some locations.
