

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 13/03/2024

Avalanche Problems

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Overall the snowpack will continue to consolidate and stabilise throughout the forecast period. Isolated areas of instabilities will linger on North-West to North-East aspects above 1000 metres. Areas most affected will be gully tops, coire rims and steep wind sheltered locations. Cornices will be found on these aspects and will be prone to collapse, especially overnight. Loss of snow at lower elevations. The avalanche hazard will be Low.

✗	High
	Considerable
	Moderate
	Low

Forecast Weather Influences

Some overnight rain, with snow being confined to the highest peaks. This will clear to leave a mainly dry day. The freezing level will be above the summits overnight before lowering to between 800 and 1000 metres during the daytime. Southerly winds will increase to storm force becoming South-Westerly.

Comments

Insignificant amounts of snowfall expected. A brief overnight thaw before snowpack starts to re-freeze once again. A very windy day to be expected.
