Avalanche Hazard Forecast

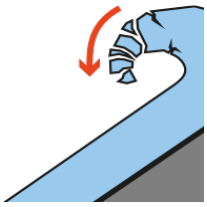

Issued 19/03/2024

FOR PERIOD 18:00HRS Tue 19/03/2024 TO 18:00HRS Wed 20/03/2024

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 20/03/2024

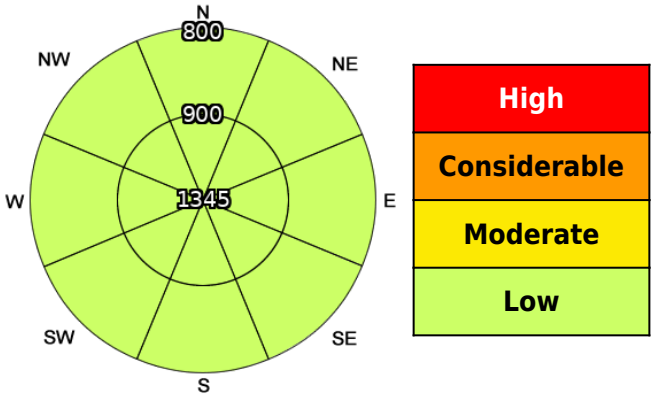

Avalanche Problems

Cornices

Forecast Snow Stability & Avalanche Hazard

The remaining snowpack will begin to refreeze at most elevations and will be stable. A crust will form on areas where deeper accumulations remain, mostly steep North to East aspects above 900 metres, around coire rims, head walls, gullies and crag aprons. Patches at lower elevations will continue to slowly thaw and diminish. Cornices remain unpredictable and fragile. The avalanche hazard will be Low.

Forecast Weather Influences

It will remain dry throughout the period with mainly variable light to moderate, North to North-East winds. The freezing level will be around 900 metres.

Comments

Rain and strong winds expected Thursday.
