

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 21/03/2024

Avalanche Problems

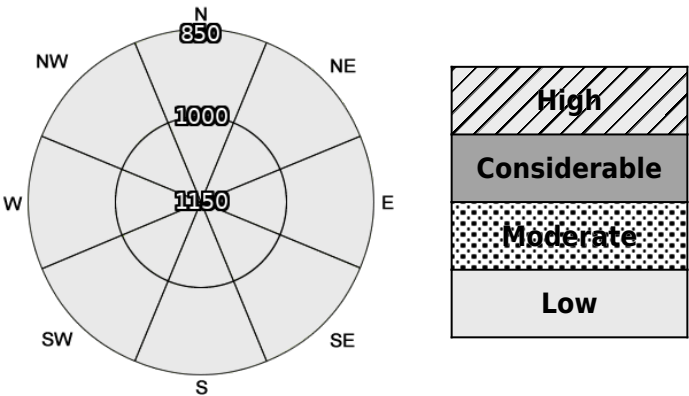

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Heavy rain and mild conditions will further reduce the snow cover at all levels. The soft and moist snowpack will generally be stable on all but the steepest slopes where wet snow instabilities will exist. Any surviving cornices will be prone to collapse threatening the slopes below. The avalanche hazard will be Low.

Forecast Weather Influences

Dry conditions overnight will be followed by wet mild and windy conditions throughout the day. A brief period of snow will fall initially but this is not expected to be heavy. Rain through the day will be heavy at times and winds will be gale to severe gale generally South-Westerly. The freezing level will rise to well above the summits.

Comments

Snow cover is limited to the highest North and East facing corries, with outlook for mild and wet conditions rockfall and cornice collapse are possible. Warning of summit gale to severe gale exists. New snow amounts are not expected to be significant.
