Avalanche Hazard Forecast

Issued 23/03/2024

FOR PERIOD 18:00HRS Sat 23/03/2024 TO 18:00HRS Sun 24/03/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 24/03/2024

Avalanche Problems

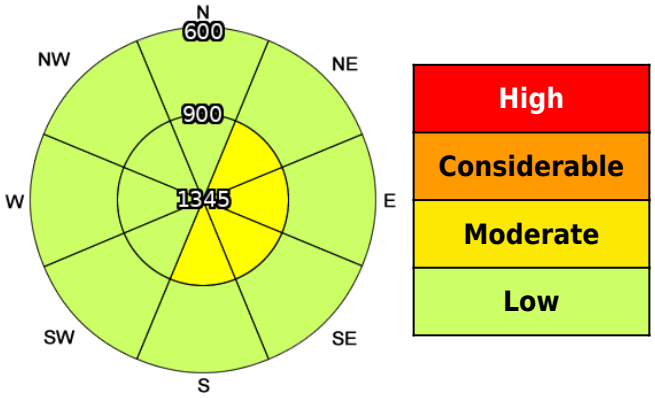

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will slowly consolidate in the generally settled conditions. However, areas of moderately bonded windslab will remain in wind sheltered locations on mainly North-East through East to South aspects above 900 metres. Fragile cornices will exist above these aspects. On exposed windward aspects the snowpack will be very shallow, and stability will be better. The avalanche hazard will be Moderate.

Forecast Weather Influences

North-Westerly winds will ease and veer to become Northerly overnight and through the day. After a few showers overnight it will be a dry day. The freezing level will be around 800 metres.

Comments

Where exposed the old snowpack is very firm and icy.
