

## THE AVALANCHE HAZARD WILL BE CONSIDERABLE

### Avalanche Hazard Forecast for Sunday 24/03/2024

#### Avalanche Problems

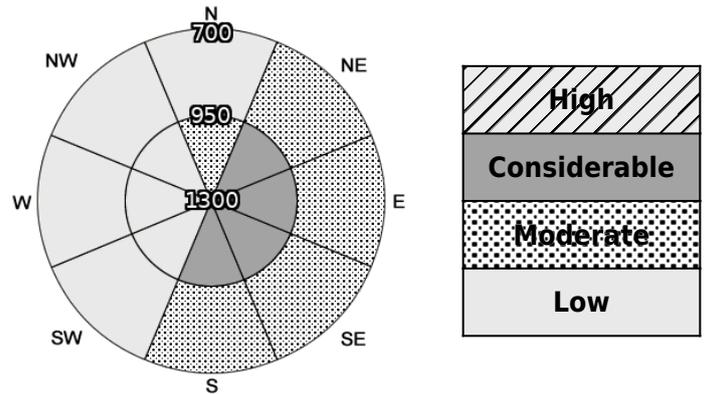

Wind Slab

Cornices

#### Forecast Snow Stability & Avalanche Hazard

Unstable windslab will continue to develop on mainly North-East through East to South aspects above 950 metres where avalanches are likely. Localised instabilities will persist on North aspects. Areas most affected will be steep wind sheltered locations such as coire rims, gully tops, crag aprons and convexities where accumulations gain depth. Below this height, on the same aspects, instabilities will be more localised. Cornices will be unstable. The avalanche hazard will be Considerable.

#### Forecast Weather Influences

Continuous snowfall forecasted above 700 metres, heaviest during the early hours. Gale force winds from the North-West will gradually ease, veering Northerly and become light. The freezing level will be around 700 metres.

#### Comments

Some uncertainty about specific snowfall amounts.
