Avalanche Hazard Forecast

Issued 26/03/2024

FOR PERIOD 18:00HRS Tue 26/03/2024 TO 18:00HRS Wed 27/03/2024

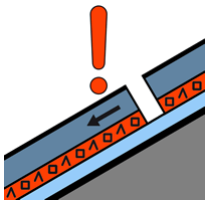

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 27/03/2024

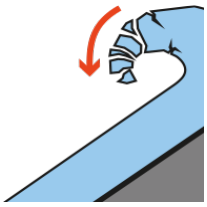

Avalanche Problems

Wind Slab

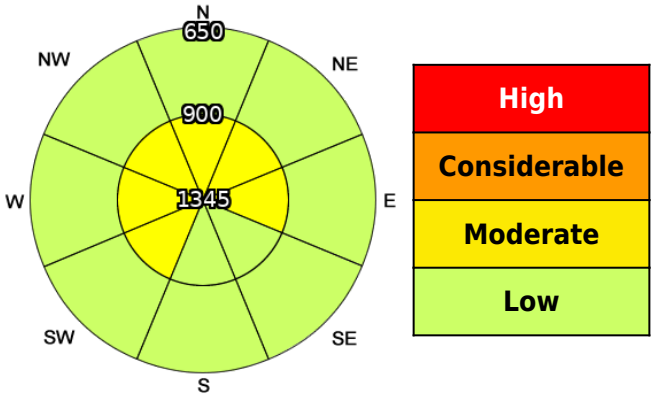

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Areas of unstable windslab will persist, mainly on steep, shady North to East aspects above 1000 metres. Fragile cornices will remain, mainly above these aspects. Localised areas of fresh unstable windslab will develop through the day mainly on South-West to North-West aspects above 900 metres. These are not expected to be extensive. The avalanche hazard will be Moderate.

Forecast Weather Influences

A dry start to the period with snow showers arriving pre-dawn and continuing through the day. Strong Easterly winds. The freezing level will rise to around 1000 metres in the afternoon.
