

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 31/03/2024

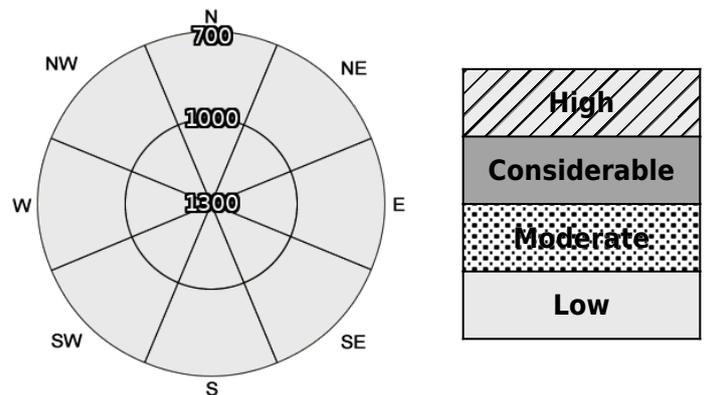

Avalanche Problems

Cornices

Forecast Snow Stability & Avalanche Hazard

Overnight, in the highest locations, the snowpack will start to refreeze before starting to soften during the day. Stability will generally be good throughout but in steep sun exposed locations some surface instabilities will develop during the day. Unstable cornices will still be present on North facing coires. Loss of snow at lower elevations. The avalanche hazard will be Low.

Forecast Weather Influences

Fresh winds generally from the South will slowly ease through the day. The freezing level will hover around the highest summits until dawn before rising to 1400 metres. No precipitation is forecasted.

Comments

Remaining mild and settled.
