

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 31/03/2024

Avalanche Problems

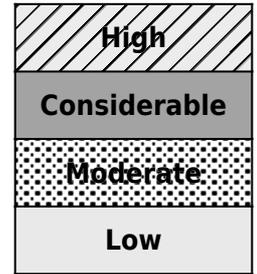

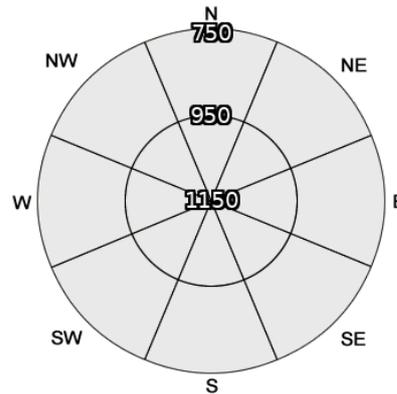

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Overnight the snowpack will firm up due to cooler surface temperatures. Throughout Sunday it will generally consolidate and gain stability in the drier and slightly warmer conditions. The surface of the snow will quickly soften during the day where exposed to sunlight. Some sluffing and surface wet snow instability may be encountered on steep South facing slopes. Any remaining cornices will be prone to collapse. The avalanche hazard will be Low.

Forecast Weather Influences

It will be dry and mainly clear overnight. Sunday will remain dry with some sunny periods. Freezing level will be at, or slightly above the highest summits throughout. However, in the clear overnight skies, surface temperatures will be cooler. Winds will be moderate and from the East or South-East.

Comments

It is forecast to be a relatively fine and dry day tomorrow. As it is now late March, the sun will have the potential for some impact on South facing slopes. These slopes will soften quickly, and may develop some surface instabilities.
