

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 02/04/2024 TO 18:00HRS Wed 03/04/2024**

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

**Forecast Weather Influences**

Mainly dry conditions are expected overnight and for much of the day. Light snow will affect the area later in the day mainly above 800 metres. Winds will be generally Easterly, fresh to strong. Summit temperatures will be around -3 celsius. The freezing level will be around 800 to 900 metres.

**Forecast Snow Stability and Avalanche Hazard**

General snowpack stability will remain good on all but the very steepest slopes where surface instabilities may develop. Corrie rims and gully exits will be most affected. Precipitation amounts are not expected to be significant and most of these instabilities will be generally shallow and avoidable. Cornices will be suspect. The avalanche hazard will be Low.

**Observed Avalanche Hazard - Tue 02/04/2024**

**Observed Weather Influences**

Light rain and summit snow affected the area overnight, today has been mainly dry with fresh Easterly winds, the freezing level is around 1200 metres.

**Observed Snow Stability and Avalanche Hazard**

The snowpack is generally stable in most areas. Isolated surface instabilities exist on the very steepest slopes in particular around corrie rims and gully exits. Greatest accumulations of remaining snow are in the higher Northerly and Easterly corries. The avalanche hazard is Low.

**Mountain Conditions**

**Observed Mountain Travel Conditions**

No snow below 650m best cover remains in the high Northerly and Easterly corries. No visibility throughout much of the day above 700 metres. Winds 20 -25 mph.

**Comments**

Only light new snow expected. The snowpack will be firm on some exposed slopes at higher levels.
