

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 02/04/2024 TO 18:00HRS Wed 03/04/2024

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Light overnight snow showers then dry. Moderate to strong Easterly airflow. Freezing near summits overnight but becoming cooler during the day.

Forecast Snow Stability and Avalanche Hazard

Additional moderately bonded windslab development expected on steep South-West through West to North-West aspects. New accumulations will be limited to areas above 950m, with gully exits and coire rims being the most affected locations. The older exposed snowpack on North to East aspects above 800m will remain firm and well stabilized. The avalanche hazard will be Moderate

Observed Avalanche Hazard - Tue 02/04/2024

Observed Weather Influences

Light but persistent snow showers above 900m during the day, with rain at lower elevations. Cold only at higher altitudes. Moderate Easterly winds.

Observed Snow Stability and Avalanche Hazard

New well bonded windslab has developed on some steeper South-West through West to North-West aspects above 950m. Accumulations are not extensive and most have formed over bare ground. Elsewhere there is a thin cover of humid fresh snow down to 900m. Older exposed snowpack is well consolidated and stable. The avalanche hazard is Low

Mountain Conditions

Observed Mountain Travel Conditions

No snow below 900m but with light drifting at higher altitudes. No visibility throughout the day above 800 metres. Winds 20 -30 mph progress difficult at times with stronger gusts

Comments

Some uncertainty over forecasted snow amounts.
