

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 05/04/2024

Avalanche Problems

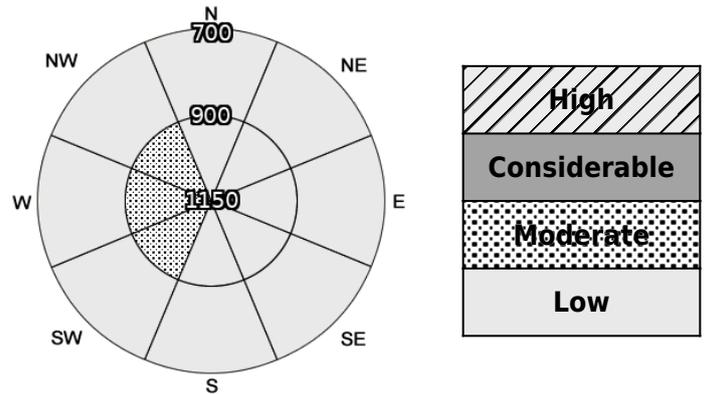

Wind Slab

Wet Snow

Forecast Snow Stability & Avalanche Hazard

Overnight localised areas of windslab will develop mainly on South-West to North-West aspects above around 900 metres. Areas most affected will be steep slope tops and gullies, where the windslab overlies old snow. These deposits will become particularly unstable as precipitation turns to rain. Wet snow surface instability possible on all steep slopes as heavier rain sets in. The avalanche hazard will be Moderate.

Forecast Weather Influences

Heavy precipitation overnight will initially be snow above around 350 metres easing to light showers and turning to rain at all levels from around midday. Rain becoming heavy towards the end of the afternoon. Gale force, mainly Easterly, winds overnight easing during the day. The freezing level will rise above all summits.

Comments

A very windy forecast for the weekend with wet and mild conditions on Saturday.
