

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 14/04/2024

Avalanche Problems

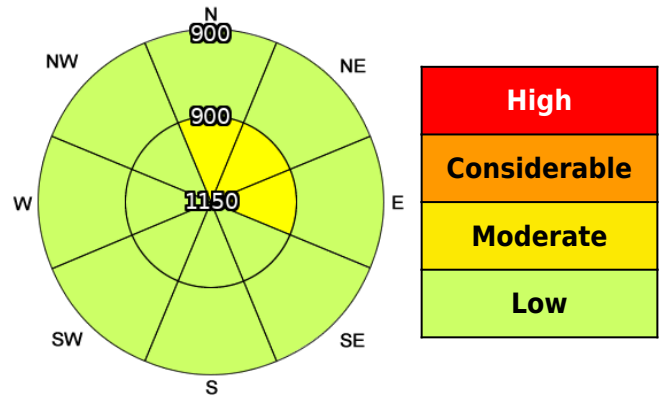

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Overnight and through the day localised areas of windslab will develop mainly on North to Easterly aspects above 900 metres. Areas most affected will be steep coire headwalls and sheltered gully exits, particularly where the windslab overlies the old snowpack. Elsewhere the new snow will generally fall on bare ground and will not be a significant avalanche hazard. New cornices will be soft and fragile. The avalanche hazard will be Moderate.

Forecast Weather Influences

The freezing level will lower to around 800 metres then rise again to 1000 metres by the end of the day. Snow showers through most of the period falling mainly above 600 metres. Winds will be very strong Westerly backing becoming South-Westerly during the day.
