

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 19/12/2024

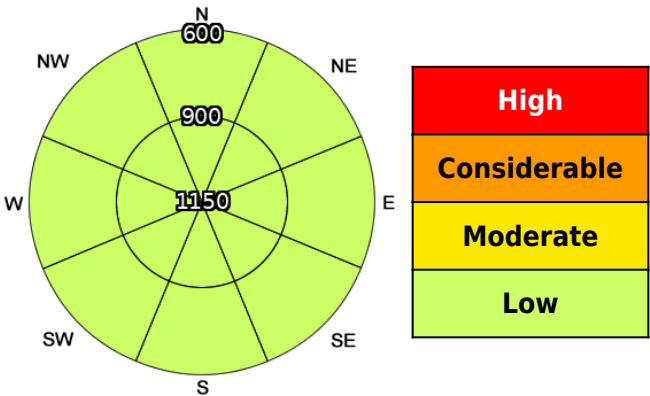

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The older patchy snow will become firmer and remain well bonded. New deposits will form shallow accumulations of windslab in very wind sheltered locations on North-East through East to South aspects above 900 metres. Deposits are not expected to become significant in depth and will lie on bare ground in many locations. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level will drop to around 500 metres with light snow showers during the day. Storm to Gale force winds from the North-West throughout the day.

Comments

Becoming cooler. Older snow, mostly in the main Cairngorms expected to become icy.
