

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 29/12/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Isolated snow patches will be well bonded and stable. These will mostly be encountered above 900 metres on North-East to South-East aspects. Thin new snow cover expected on the very highest mountains along the Northern boundary of the forecast area. The avalanche hazard will be Low.

Forecast Weather Influences

Drizzle or light rain overnight and through the morning, becoming slightly heavier during the afternoon. Light summit level snow on the very highest mountains along the Northern boundary of the area. Freezing level above the summits, lowering to around 1200 metres by the end of the period. Gale force West-South-Westerly winds.

Comments

Looking more unsettled over the next 48 to 72 hour period.
