

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 03/01/2025

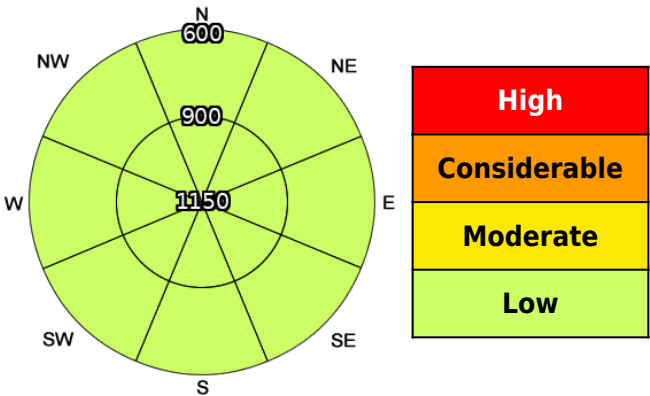

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Unstable accumulations will be present in steep wind sheltered locations mainly on East to South aspects above 900 metres. Stability poorest where deposits have depth in steep terrain. Elsewhere, deeper drifts will be encountered at lower levels in lee locations. Any area exposed to the strong winds will be scoured with old icy snow. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight light snowfall, easing early morning, dry thereafter. Freezing level expected to be 400 metres during the day. Overnight very strong winds will ease becoming a fresh breeze, initially North-North-West backing to the West-North-West by the end of day.

Comments

Very much full Winter conditions on the hills. If intending to travel within the main Cairngorms worth reading North Cairngorms reports as well.
