

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 04/01/2025

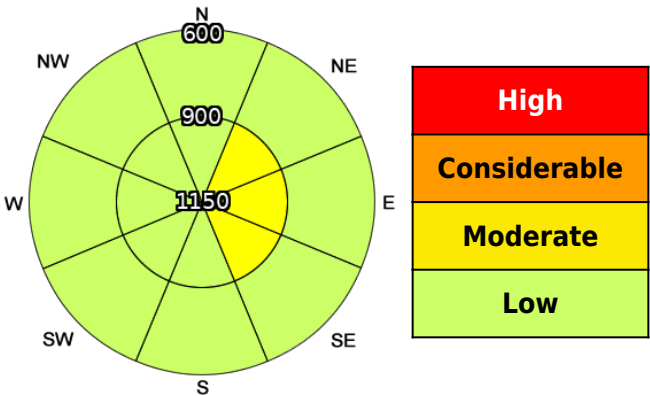

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Redistribution of existing soft unconsolidated deposits will lead to localised accumulations of shallow windslab forming mainly on North-East to South-East aspects above 900 metres. Where accumulations achieve depth in wind sheltered locations and develop over older snow-ice, stability will be poor. Elsewhere, there will be a covering of soft powdery snow on many aspects. The avalanche hazard will be Moderate.

Forecast Weather Influences

The freezing level will be around 500 metres during the day. Dry throughout this period. Winds backing overnight to South-West or West-South-West for most of the day. Fresh to strong throughout.

Comments

Very icy underfoot
