

**Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sat 11/01/2025 TO 18:00HRS Sun 12/01/2025**

Hazard Level	Avalanche Probability
<b>Very High</b>	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
<b>High</b>	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
<b>Considerable</b>	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
<b>Moderate</b>	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
<b>Low</b>	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

**Forecast Weather Influences**

Dry, milder conditions will affect the area. Winds will be generally Southerly fresh initially becoming strong through the course of the day. The freezing level will rise above the summits.

**Forecast Snow Stability and Avalanche Hazard**

Milder conditions will moisten the snowpack giving good general stability on all but the steepest slopes and gullies where surface instabilities will exist. There will be a general reduction of snow cover particularly at lower levels. Any remaining small cornices will be fragile. The avalanche hazard will be Low.

**Observed Avalanche Hazard - Sat 11/01/2025**

**Observed Weather Influences**

It has been mainly dry overnight with fresh South-Easterly winds. Light snow showers above 400 metres affected the area later in the day. The freezing level was around 600 metres.

**Observed Snow Stability and Avalanche Hazard**

Soft generally stable snow exists on most aspects above 500 metres. Isolated pockets of windslab exist in wind sheltered locations, mainly North-East to South-Easterly aspects above 900 metres. These accumulations are localised mainly in steeper locations such as gully tops and corrie rims. Areas exposed to the wind are scoured and icy in places. The avalanche hazard is Low.

**Mountain Conditions**

**Observed Mountain Travel Conditions**

Soft snow cover above 500 metres - some exposed areas scoured and icy. Winds approx 15- 30 mph. Cloudy on the tops.

**Comments**

A return to milder conditions will see a general reduction of snow cover at lower levels, icy conditions will exist on exposed slopes paths and watercourses.
