

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sat 11/01/2025 TO 18:00HRS Sun 12/01/2025

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

It will be a dry day with increasing South-Easterly winds. The freezing level will gradually rise to above summit level during the day

Forecast Snow Stability and Avalanche Hazard

The snowpack will gradually thaw and consolidate at all levels. Any current instabilities will gradually stabilise during the period. Any cornices will become prone to collapse. The avalanche hazard will be Low

Observed Avalanche Hazard - Sat 11/01/2025

Observed Weather Influences

It has been a cold day with some light snow showers and a moderate South-Easterly wind over the summits

Observed Snow Stability and Avalanche Hazard

The snowpack is generally shallow and stable with little base. Some localised instabilities are present, mainly at the tops of steep and sheltered East, South-East and South aspects above 1000m. Some redistribution is also depositing snow on North-Westerly aspects. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions

A cold day with reasonable visibility. Increasing South-Easterly winds

Comments

The freezing level will gradually rise during the period giving a hazard of falling ice and rocks from steeper ground.
