

Avalanche Hazard Forecast for Wednesday 22/01/2025

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

There is currently insufficient snow for an avalanche hazard and no avalanche reports will be published until conditions change. For further information please refer to the SAIS mountain blog.

Forecast Weather Influences

Largely dry and part cloudy, but a light snow shower cannot be ruled out, The freezing level will gradually lower through the period from around 1000 to 800 metres. There will be a light to moderate Southerly wind.

Comments

Any deposits of new snow will be insignificant.
