

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 04/02/2025 TO 18:00HRS Wed 05/02/2025

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Much colder with persistent light snow showers overnight and during the day. Moderate to strong West-South-West winds.

Forecast Snow Stability and Avalanche Hazard

The old snowpack will freeze become crusty or firm and be well stabilised where exposed. Accumulations of new moderately bonded windslab will develop on steep North to East aspects above 900m. Most affected areas will be coire rims and gully exits. Early consolidation in new snow expected by the end of the day. The avalanche hazard will be Moderate.

Observed Avalanche Hazard - Tue 04/02/2025

Observed Weather Influences

Rain at all levels overnight and during the morning. After midday, cooler with some light showers falling as sleet then snow above 950m. Moderate to strong West-South-West winds.

Observed Snow Stability and Avalanche Hazard

Good stability in most locations. Moist or wet but well bonded snow below 900m. Above 950m the snowpack is in transition from wet and thawing to crusty or firm with a little thin new drifted snow forming on North to East sheltered lee slopes. Early minor hazard of small full depth avalanches on the Post Face of Coire Ardair. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions

Wet snowpack. Cloud base was at 700 metres all day. Winds 20-30 mph progress difficult at times with stronger gusts.

Comments

Due to showery nature of forecasted snowfall it's possible there may be more, or less, windslab.
