

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 12/02/2025

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The patchy snow cover will be firm and generally stable in all locations. Greatest snow cover will be mainly in mountain areas inland from the coastal ranges and on Northerly to Easterly aspects above 750 metres. Snow will be mostly confined to coire rims, ridge flanks and gullies. The avalanche hazard will be Low.

Forecast Weather Influences

Overnight the winds will be gale force East-South-Easterly, then decreasing to strong during the early hours. The freezing level will fluctuate around 600 metres. No precipitation is expected.

Comments

Snow will be very hard and icy with serious consequences for any slips or falls.
