

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 21/02/2025

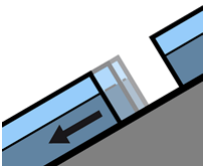

Avalanche Problems

Wet Snow

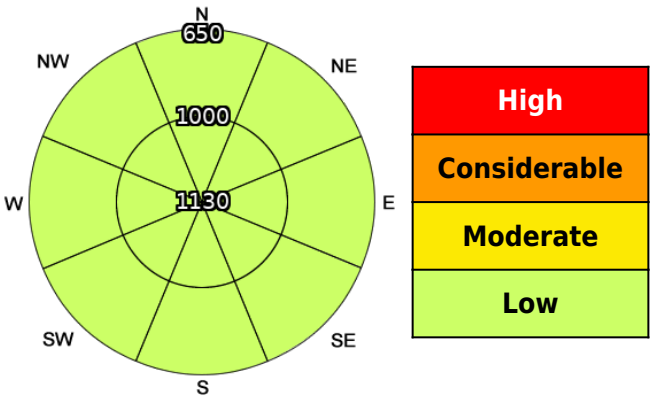

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

The snowpack will be wet but reasonably well bonded in most locations. Some residual wet snow instability on steep North-West through North to North-East above 1000m. Any remaining cornices over these locations will be wet, weak and prone to sudden collapse. Potential for minor full depth avalanches from the Post Face of Coire Ardair. Falling ice an objective danger in the immediate vicinity of steep crags in Coire Ardair. The avalanche hazard will be Low

Forecast Weather Influences

Slightly cooler and drier overnight then very wet and mild.

Comments

Falling ice and rocks possible in vicinity of steep crags during the mild, wet weather.
