

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 28/02/2025

Avalanche Problems

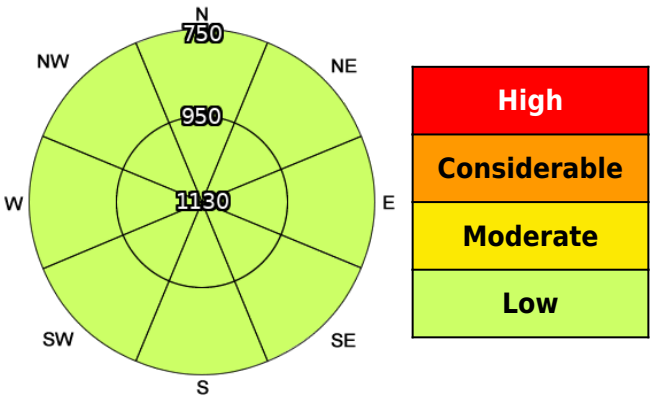

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to consolidate and be generally stable in most locations. Isolated instabilities will persist within windslab mainly on North to East aspects above 950 metres. Areas most affected will be coire rims and gully tops. Cornices will be present above the same aspects and may be prone to collapse. The avalanche hazard will be Low.

Forecast Weather Influences

Another dry day is expected with the freezing level rising to around 900 metres. Winds will be moderate West-South-West initially backing South-South-West and steadily increasing to become strong.

Comments

Forecast dry for daytime Friday with a band of rain and snow passing through overnight into Saturday. Winds increasing for the weekend.
